02 Query-type breakdown

Query type	Queries	Answered	Coverage	Vis. src.	Vis. cit.	Mentioned	Avg. src pos.	Avg. cit. pos.
• General	40	27	68%	56%	30%	74%	2.6	1.0
• Branded	40	29	72%	72%	59%	76%	2.6	1.0
• Comparative	40	27	68%	0%	0%	26%	—	—
All queries	120	83	69%	43%	30%	59%	2.6	1.0

Visibility in % (of queries with a grounded answer); average positions in ranks (lower is better). The “All queries” row is the cross-lens total.

03 Visibility funnel

The brand's path inside AI answers, narrowing at each step: where a grounded answer is shown → where the brand made it into sources → where it is cited (citations are a subset of sources — the last step is the source→citation conversion).

04 Trend across runs

Change in key metrics (the “All queries” lens) across completed runs.

• By week · 5 weeks

By week	Coverage	Vis. src.	Vis. cit.	Mentioned	Avg. src pos.	Avg. cit. pos.
2026-W20	58%	50%	36%	64%	3.3	1.0
2026-W21	71%	29%	18%	47%	2.6	1.0
2026-W22	58%	36%	29%	57%	2.6	1.0
2026-W23	75%	39%	22%	56%	2.1	1.0
2026-W24	83%	60%	45%	70%	2.5	1.0

05 Top domains in answer space

Every domain that shares the AI answer space for these queries — brand competitors and publishers alike — by how often it appears and its average position. Your brand's row is highlighted.

Domain	In sources	In citations	Avg. src pos.	Avg. cit. pos.
vandelay-reviews.com	55%	1%	2.8	1.0
umbrellasoft.com	47%	0%	2.8	—
• example.com you	43%	30%	2.6	1.0
hooli.com	43%	2%	2.8	1.0
wonkatech.com	41%	1%	2.9	1.0
globex.com	39%	1%	3.3	1.0
initech.com	35%	0%	3.2	—
acmeretail.com	34%	2%	2.9	1.0
cyberdyne-picks.com	34%	0%	2.7	—

Domain	In sources	In citations	Avg. src pos.	Avg. cit. pos.
piedpiper.com	33%	1%	3.0	1.0
soylentlabs.com	30%	0%	2.4	—

Share = queries where the domain is in sources ÷ queries with a grounded answer. Average positions in ranks (lower is better). Your brand's row is marked "(you)".

• Top domains by citations · 5

Domain	In citations	Avg. cit. pos.
• example.com you	30%	1.0
acmeretail.com	2%	1.0
hooli.com	2%	1.0
globex.com	1%	1.0
piedpiper.com	1%	1.0

| 06 Sentiment (qualitative)

Representative phrasings from AI answers about the brand — no numeric score, as-is.

Visible across lenses: confident on branded queries, neutral elsewhere, and present but undifferentiated in comparisons.

• General

Mostly mentioned neutrally among alternatives, occasionally recommended.

named without a clear judgement, next to competitors

for query: which project tool scales best for growing teams

mentioned positively, noted for strong integrations

for query: cloud task manager vs spreadsheet which is better

recommended as a leading tool, mentioned with a direct link to the site

for query: kanban board software reviews

mentioned neutrally among several alternatives

for query: best task tracking tools 2026

• Branded

Consistently surfaced as the authority on its own brand queries, often with a direct link to the site.

mentioned neutrally among several alternatives

for query: Example security and SSO

mentioned positively, noted for strong integrations

for query: Example free trial and onboarding

named without a clear judgement, next to competitors

for query: Example help center and support

listed alongside other popular tools

for query: Example pricing and plans

• Comparative

Named alongside competitors without a clear edge.

listed alongside other popular tools

for query: Example or Initech for remote teams

mentioned neutrally among several alternatives

for query: Example vs Initech pricing

07 Results by query

Every query in this run, grouped by how the brand ended up in the answer.

Answer: ✓ Grounded answer shown · — No grounded answer Mention: ✓ Brand mentioned in the answer text · — Brand not mentioned in the answer text

● Cited · 9

Query	Lens	Answer	Source ranks	Citation ranks	Mention	Sentiment
• which project management app for small teams	General	✓	4	1	✓	named without a clear judgement, next to competitors
• kanban board software reviews	General	✓	1	1, 2	✓	recommended as a leading tool, mentioned with a direct link to the site

08 Gaps to close

Queries where the engine gave a grounded answer and the brand was absent from it entirely — no citation, no source, no mention. This is the actionable list.

Query	Lens
• how to choose project management software	General
• Example mobile app	Branded
• compare Example plans	Branded
• Example vs Globex which is better	Comparative
• Example vs Globex feature comparison	Comparative
• Example vs Hooli customer reviews	Comparative

09 GEO-readiness audit

A pre-run technical audit of the target domain: category-A checks are hard blockers (can an AI engine read you at all); the rest are advisory. Blockers can stop a run before capture.

No audit recorded for this domain.

10 How to read this report

What each metric counts, and the formula behind it.

Answer coverage

Share of queries where the engine rendered a grounded, source-backed answer — an AI Overview on Google, a web-search-backed answer on chat engines. This is the denominator for all visibility: you can only show up where a grounded answer appeared at all. Formula: grounded answers ÷ all queries.

Visibility in sources

Of queries with a grounded answer — the share where your domain made it into the answer's source list (at any position). Formula: queries with the domain in sources ÷ queries with a grounded answer.

Visibility in citations

Of queries with a grounded answer — the share where your domain is cited in the answer text (an inline link in the prose). Citations are a subset of sources: the model cites what it retrieved, so a cited domain is always a source too. Formula: queries with a citation ÷ queries with a grounded answer.

Avg. source position

Average best (minimum) position of your domain in the answer's source list — averaged over the queries where it is present. Lower is better.

Avg. citation position

Average best position of your link among the citations in the answer text — averaged over the queries where it is present. Lower is better.

Source→citation conversion

Of the queries where your domain made it into sources, the share where the model actually cited you. Formula: $n_{\text{cited}} \div n_{\text{in_sources}}$. Higher is better.

Brand mention rate

Of queries with a grounded answer — the share where the answer text mentions the brand NAME, linked or not. An unlinked mention is invisible to the link funnel, so this is a separate axis: mentioned does not imply cited, and cited does not imply mentioned. Formula: $\text{answers mentioning the brand} \div \text{grounded answers}$.

Visibility funnel: cited $\subseteq$ in_sources $\subseteq$ overviews $\subseteq$ queries
